Legal recruitment

AI-powered LinkedIn outbound engine for Ackuity.ai

How we helped Ackuity.ai replace manual LinkedIn outreach with an AI engine that identifies prospects, researches them automatically, and delivers personalized outreach that books qualified meetings.

Ackuity.ai is looking to generate qualified conversations through LinkedIn outreach.

Quantal AI proposes building an AI-assisted outbound engine that combines prospect intelligence, personalized messaging, and automated execution while maintaining a human-like outreach experience.

Rather than relying on generic sequences, the system will research every prospect, generate personalized messaging using Claude, automate outreach through LinkedIn, and continuously optimize campaigns based on responses.

The objective is to deliver a repeatable outbound process that can later scale to thousands of prospects per month.

Client

Ackuity.ai

Industry

Legal recruitment

Services Provided

AI workflow automation, LinkedIn outbound engine

Tech Stack

Claude AI, n8n, PhantomBuster, Apollo, Google Sheets, Airtable

3rd Party Services

LinkedIn, Apollo

Outcome

Scales to 1000s of prospects/month

Our client

Mode is a UK-based, publicly listed crypto company with an ambitious plan to revolutionize the industry. Their compelling vision goes beyond simply making Bitcoin mainstream, with a goal to deliver ground-breaking financial products that build accessibility, transparency, and credibility around digital assets and transform the way that people manage their finances.

Mode has launched a first-of-its-kind and revolutionary financial app in the UK that allows users to access GBP, EUR, and BTC accounts, and grow their digital assets, all in one place.

Industry

Fintech, blockchain

Services provided

Back-end development, full-stack web app development

Tech stack

Node.js, JavaScript, Koa, Flow, PostgreSQL, BitGo SDK, Node-schedule, AWS SNS/SQS/Lambda, Express, React, GraphQL

3rd-party services

Onfido, Twilio, BitGo, Chainalysis, Sardine.ai, Modulr, Coinbase

Objectives

- Identify ICP companies and decision makers
- Generate highly personalized outreach
- Increase LinkedIn acceptance rates
- Improve reply rates
- Book qualified meetings for Ackuity.ai

THE OBJECTIVES

What Ackuity.ai Needed to Achieve

- Identify ICP companies and decision makers
- Generate highly personalised outreach
- Increase LinkedIn acceptance rates
- Improve reply rates
- Book qualified meetings for Ackuity.ai
- Scale to thousands of prospects per month

Proposed Architecture

Apollo

Lead Database

PhantomBuster
(LinkedIn enrichment)

Claude AI

- Prospect research
- Company research
- Pain points
- Personalized messages

Campaign Engine
(Connection Requests
Follow-ups
Message Sequences)

The challenge

Generic sequences not delivering results

Ackuity.ai was relying on generic LinkedIn sequences that did not personalize outreach to individual prospects resulting in low acceptance rates, poor reply rates and insufficient qualified meetings being booked.

The solution

AI-assisted outbound engine at scale

Rather than relying on generic sequences, the system researches every prospect, generates personalized messaging using Claude, automates outreach through LinkedIn, and continuously optimizes campaigns based on responses.

Our Workflow

1. Phase 1 — Prospect Discovery via Apollo

Built ICP filters, exported decision makers, verified company information, and removed duplicates. Delivered a curated prospect database with segmentation and industry categorization.

2. Phase 2 — AI Research via Claude

Claude automatically analyses every prospect's company website, recent news, job openings, LinkedIn profile, industry, possible challenges and AI opportunities.

Output

Each prospect receives a research summary.

Prospect

VP Engineering

Company

Series B SaaS company

Pain Points

Scaling engineering

Customer support

automation AI roadmap

Suggested hook

Mention recent funding announcements and hiring plans.

3. Phase 3 — Personalized Messaging

Claude generates a connection request, first message, and 3 follow-ups for every prospect. Each message references the prospect's company, industry, role, current initiatives and relevant AI use cases. No template-style messaging.

4. Phase 4 — LinkedIn Automation Using PhantomBuster

Automation includes visit profiles, send connection requests and personalized messages, track responses, and export replies. Automation will remain within safe daily limits to maintain a human-like outreach experience.

5. Phase 5 — Human Review Before Launch

Before every campaign launch Quantal reviews message quality, personalisation accuracy, campaign settings and targeting. This reduces AI hallucinations and improves overall messaging quality.

What we delivered

ICP Definition

- Target industries
- Personas
- Filters

AI Research Pipeline

Automatically researches prospects.

Personalized Outreach Generator

It Creates

- Connection requests
- First messages
- Follow-ups

LinkedIn Automation

- Automated campaign execution.

Analytics Dashboard

- Campaign metrics and reporting.

Documentation

Complete documentation for

- Running campaigns
- Updating ICP
- Adding new messaging

WHAT WE DELIVERED

Deliverables

ICP Definition

→ Target industries

→ Personas

→ Filters

AI Research Pipeline

→ Automatically researches every prospect

→ Generates research summary per contact

Personalised Outreach Generator

→ Connection requests

→ First messages

→ Follow-up sequences

LinkedIn Automation

→ Automated campaign execution

→ Safe daily limits maintained

Analytics Dashboard

→ Campaign metrics

→ Reporting

Documentation

→ Running campaigns

→ Updating ICP

→ Adding new messaging

Our Technology Stack

Component	Tool
Lead Database	Apollo
AI Research	Claude
LinkedIn Automation	PhantomBuster
Workflow Automation	n8n
Data Storage	Google Sheets / Airtable

Client Responsibilities

Ackuity.ai will provide:

- LinkedIn account(s) for outreach (Business Premium / Sales Navigator access is preferred)
- Apollo subscription (or access)
- Claude API key or subscription (if preferred)
- PhantomBuster subscription
- ICP validation
- Branding and messaging guidelines

Our Future Enhancements

Once the pilot is successful, the platform can be extended with:

- Multi-account LinkedIn scaling
- Email outbound alongside LinkedIn
- Automated reply classification using AI
- Meeting scheduling automation
- CRM integration (HubSpot/Salesforce)
- A/B testing of messaging
- Intent-based lead prioritization
- Continuous optimization based on campaign performance

Case Study 2

[Home](#) / [Case Studies](#) / Recruitment Data Enrichment & CRM Automation

Recruitment & Talent Acquisition

AI-Powered Recruitment Data Enrichment & CRM Automation

How we helped Harry Ridgard turn a time-consuming recruitment data process into an automated pipeline that extracts prospects, enriches decision-maker information, and delivers clean data directly into HubSpot.

Harry Ridgard's recruitment and talent acquisition workflows relied heavily on manual data sourcing, enrichment, and CRM management, making it difficult to process large volumes of prospect and company data efficiently.

Quantal AI proposed building an automated recruitment data pipeline that connects Sourcebreaker, ZoomInfo, and HubSpot to streamline the entire process from data extraction to CRM population.

Rather than manually sourcing and enriching data across multiple platforms, the system automatically extracts relevant recruitment and company data from Sourcebreaker, enriches it with verified decision-maker information through ZoomInfo, and cleans, validates, and deduplicates records before pushing them into HubSpot.

The objective was to eliminate repetitive manual work, improve data quality, accelerate recruitment and outreach workflows, and create a scalable process capable of handling large datasets without additional operational overhead.

Client

Harry Ridgard

Industry

Recruitment & Talent Acquisition

Services Provided

Recruitment Data Automation, Data Enrichment & CRM Automation

Tech Stack

Python, Sourcebreaker, ZoomInfo, HubSpot, Custom API Connectors

3rd Party Services

Sourcebreaker, ZoomInfo, HubSpot

Outcome

Automated data sourcing and enrichment, improved data quality, faster outreach cycles, and scalable CRM workflows

3rd-party services

Onfido, Twilio, BitGo, Chainalysis, Sardine.ai, Modulr, Coinbase

The Challenge

Recruitment teams rely heavily on accurate, up-to-date decision-maker data to drive outbound hiring and business development efforts. However, sourcing this data manually across multiple platforms is time-consuming, fragmented, and prone to inconsistencies.

The client faced three key challenges:

- Extracting large volumes of relevant prospect data from sourcing platforms.
- Enriching raw candidate and company data with verified decision-maker information.
- Ensuring clean, structured, and deduplicated data was automatically pushed into their CRM (HubSpot) without manual intervention.

The existing workflow required significant manual effort, slowed outreach velocity, and limited scalability.

Our Solution

We built an end-to-end recruitment automation and data enrichment pipeline that seamlessly connected sourcing, enrichment, and CRM ingestion.

The system consisted of three core layers:

1. Automated Data Extraction (Sourcebreaker Integration)
 - Scraped and extracted targeted recruitment and company data directly from Sourcebreaker.
 - Applied filtering logic to ensure only relevant profiles and organizations were processed.
 - Structured raw data into a normalized format for downstream enrichment.
2. Decision-Maker Enrichment (ZoomInfo Integration)

- Automatically passed extracted company data into ZoomInfo.
- Identified and retrieved verified decision-maker details (titles, roles, contact attributes).
- Ensured enrichment accuracy by matching companies and roles before data insertion.

3. CRM Population & Workflow Automation (HubSpot)

- Cleaned, deduplicated, and validated enriched records before CRM ingestion.
- Automatically populated contacts and companies into HubSpot with proper field mapping.
- Enabled recruiters to instantly access decision-maker data inside their existing CRM workflows.

Results & Impact

- **Significant Time Savings:** Eliminated manual data sourcing and enrichment efforts.
- **Improved Data Quality:** Recruiters gained access to verified, decision-maker-level data.
- **Faster Outreach Cycles:** Enabled quicker prospecting and recruitment outreach.
- **Scalable Workflow:** System handled large datasets without additional operational overhead.
- **CRM Reliability:** Clean, structured data ensured HubSpot remained accurate and actionable.

Our Technology Stack

- **Backend & Automation:** Python-based automation workflows
- **Data Sources:** Sourcebreaker (data extraction), ZoomInfo (data enrichment)
- **CRM:** HubSpot (contact and company management)
- **APIs & Integrations:** Custom API connectors and data-matching logic
- **Data Processing:** Validation, normalization, and deduplication pipelines

Why Choose Our Solution?

- Proven experience building automation systems for recruitment and sales teams.
- Deep expertise in data scraping, enrichment, and CRM integrations.
- Scalable architecture designed for high-volume prospecting workflows.
- Seamless integration into existing tools without disrupting operations.

Next Steps

If you're looking to automate recruitment data sourcing, enrich decision-maker intelligence, and keep your CRM continuously updated with high-quality leads, we can help design and implement a system tailored to your hiring and outreach goals.
